

- ✔ Enables the website owner to edit, update, create, delete website content and even add, remove or modify functionality features on the fly without any background or education in web design or web development.
- ✔ Gives the website owner complete autonomy over website content and eliminate the expense of hiring a web designer, web administrator or web developer to make changes every time the need calls for it.
- ✔ Provides the Website owner with a safe and secure environment through the browser to administer web site content and features. This feature is a password protected area built into the website that can be accessed through a special URL.
- ✔ Enables the website owner to setup user accounts with optional security permissions for other website administrators to work on the site. This functionality can be controlled and fine-tuned to allow access only to the required content and areas.
- ✔ Thousands of free mini applications called (plug-ins) available for free to enhance the website functionality and look and feel - allowing the website owner to go as simple or as complex as desired.
- ✔ Unlike some CMS and Do-It-Yourself solutions, our web applications are well received by search engines.
- ✔ Our CMS websites can be configured to output static HTML pages which are 25 times faster to serve than other CMS packages.
- ✔ Allows the creation of an unlimited number of pages and content, upload images and videos right into your pages.
- ✔ Create full featured blogs with optional comments and rating.
- ✔ Optionally you may request a Fully functional E-Commerce shopping cart and catalog built right in for physical shipping products, digital download or subscription services. The ultimate CMS / E-Commerce combo for small to medium size businesses.
