

🚩 Joomla Website Design

Joomla is considered the most stable and powerful framework for an effective content management system, though its major capabilities lie in its extensions or components. Apart from being a free open source tool, Joomla is effectively designed to create blogs, interactive portals, multi-language websites, online communities and e-commerce applications quickly.

🚩 Joomla Services offered by Suninway.

- PSD to Joomla Template conversion: We at Suninway Web Design create 100% table-less XHTML templates at affordable prices. The templates are developed for full flexibility and collapsibility of module positions. To render the page to SEO obligations, the layout coding is done in accordance with current SEO web standards.

- Joomla Custom Design Templates: Apart from creating light-weight templates with fast-loading structure, we design templates to be compatible with all popular browsers, from Internet Explorer to Chrome. All the templates are custom programmed for client requirements. Our custom template design teams also offer Customization of readymade templates, HTML to Joomla conversions, Template migrations.

- Joomla Custom Module Development: Custom module can be created and stored directly to your database, making it easier for the client. The module can be flexible to match up the requirements from SEO and CMS demands. We also develop custom modules for multiple Images upload and multiple language selection.

- Joomla Custom Component Development: Our Joomla team can tweak and enhance or build custom components from scratch to match your needs effortlessly. Developing custom components enhances your site for a superior user experience that holds key to your moving forward in the

competition.
