

🚩 Looking for professional mobile web design?

The mobile websites created using our platform will guarantee a user-friendly experience and smooth touch browsing throughout all devices. The websites can be viewed from any mobile phone on every screen resolution, horizontally and vertically. They are adapted and optimized for every mobile browser, programmed in HTML+CSS.

🚩 How does it work?

When a visitor comes to your current website the short mymoobile script recognizes that your site is viewed with a smartphone or tablet and instantly switches them to your mobile site.

Suninway mobile websites are optimized for mobile navigation thanks to various widgets which will improve your web performance and the interaction with your visitors:

- ✓ Social media integration: allows users to share your site through social networks instantly, drawing the attention of other potential customers towards your business.
- ✓ Click-to-call: add your phone number on your mobile site information to offer one tap phone to phone connections.
- ✓ Mobile map: Insert your postal address and your business will be automatically located on a map (e.g. google maps), helping visitors find you via GPS.

We pride ourselves on delivering our clients the highest standards of quality and professional service possible and enjoy a pleasant working relationship with all of them.

Move to the next level and soar ahead of the competition. Contact Suninway to build a mobile website today!
